1. Introduction

Photocatalytic Air Purifer
flash streamer

Daikin’s original electro-discharge streamer technology is used for powerful decomposition and removal efficiency in the flash streamer air purifiers we are marketing globally.

Totally differentiated from the competition, our technology and performance are available nowhere else.

World’s first Flash streamer
World’s first Titanium Apatite Photocatalytic Filter
World’s first Bio-antibody filler

Air purifier with renewed design for performance and beauty.

Flash streamer is the electro-discharge used in our air purifier that decomposes (oxidizes) more than 1,000 times more than glow discharge*

What is Flash Streamer?
Flash Streamer is a unique technology developed by Daikin.
The Flash Streamer releases streams of high-speed electrons with strong oxidation power.

*Glow discharge: The most common type of plasma that is used by a plasma ionizer, etc., for electrostatic dust collection.
Decomposition is continuous

- When formaldehyde’s concentration of 0.2** ppm is continually emanated

Operation start

Test conditions: Air flow: 420 m³/h; Test room: approx. 9.6 m²
(Compliant with Ministry of Land, Infrastructure and Transport (Japan) guideline.)

* Tentative WG guideline based on Ministry of Land, Infrastructure and Transport (Japan)
sick house evaluation method.

Differing from transitory pollutants such as cigarette smoke, the removal of formaldehyde is considered more difficult because it continually emanates. Flash streamer makes removal possible.

With Titanium Apatite Photocatalytic Filter, Flash streamer, and Bio-antibody filter,

Removal of allergens
Allergen total removal
Removal of adjuvants
Diesel exhaust particles
Exhaust gas
VOC
Powerful deodorizing
Powerful bacteria removal

Mites
Pollen
Mold
and others

06CJG-5

06CJG-6

06CJG-7
Adjuvants are substances included in air pollutants such as exhaust gas that, when inhaled along with allergens, make one’s allergy symptoms worsen.

Only flash streamer removes adjuvants.

Powerfully breaks down odors in 3 stages!

Disinfection

The Flash Streamer further activates the photocatalyst!
**Bio-Antibody Filter**

The Bio-Antibody filter works in the same way as the influenza vaccination. It removes viruses in about 1 minute.

- The Bio-Antibody filter is usable for one year after opening.
- Replacement for subsequent years will be available.
- Operation will not be adversely affected if the Bio-Antibody filter is not used.
- Effective for 3 years from date of manufacture.

**Catechin Pre-Filter**

The pre-filter not only catches large dust particles, pet hairs, etc., but also removes germs attached to them by means of the catechin component.

What is Catechin?

Catechin, a bitter-tasting component found in plants, is a type of polyphenol. Found in abundance in tea, it possesses antibacterial and anti-oxidative properties. It is used in clothing such as underwear and in products such as marks and bleeding.

**Purifies with large air flow**

420m³/h. high-power suction!

- **Guideline purification times**

<table>
<thead>
<tr>
<th>Area (m²)</th>
<th>Time (min.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>7</td>
<td>Purified in 7 minutes</td>

(Results based on testing carried out in accordance with Japan Electrical Manufacturers Association JEM1467 standard.)
Introduction

Photocatalytic Air Purifiers

**Designed to be quiet**

A mere 31 dB even in M mode (standard mode). It’s as quiet as a whisper. Top-ranking silent operation is achieved by Daikin’s original shroud fan and a low-pressure-loss filter.

### Operation sound and air flow

<table>
<thead>
<tr>
<th>Airflow (m³/h)</th>
<th>Operation sound (dB)</th>
</tr>
</thead>
<tbody>
<tr>
<td>60</td>
<td>16 dB in LL mode</td>
</tr>
<tr>
<td>120</td>
<td>24 dB in L mode</td>
</tr>
<tr>
<td>180</td>
<td>31 dB in M mode</td>
</tr>
<tr>
<td>285</td>
<td>38 dB in H mode</td>
</tr>
</tbody>
</table>

Operation sound is kept below 47 dB even at maximum air flow of 420 m³/h. (HH mode).

**7-year pleated filter**

Comes with 7 pleated filters. Operation is economical since the air purifier comes with 7 filters. You won’t need to buy filters for 7 years. Also, since the filter is replaced each year, filter efficiency will not drop. Easy filter storage! Unused filters can be stowed neatly inside the unit.

**Control the numerous features with the easy-to-use remote control.**

- **Antitamper lock**: It prevents small children from mishandling.
- **TURBO mode**: This convenient mode provides high-power operation.
- **Off timer**: The remote control can be set to turn off the unit after 1, 2 or 4 hours.
- **Pollen mode**: By creating a gentle turbulence in the room air, pollen is caught before it lands on the floor.
- **Negative ions**: The large air flow fills the entire room, corner to corner, with freshened air.
- **Display adjustment**: The brightness of lamps on the indicator panel can be adjusted.

The remote control stores neatly in the top of the unit.
Flat panel blends with interiors and is easy to clean.

**Quick-wipe panel**

Designed for easy maintenance, a single wipe with a wet cloth is all it takes to keep it clean.

06CJG-17
2. Precautions for Use

2.1 Required Conditions

**Ambient Temperature/Humidity**
Use this product under the following conditions.

<table>
<thead>
<tr>
<th>Operating conditions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Room temperature</td>
</tr>
<tr>
<td>Room humidity</td>
</tr>
<tr>
<td>0°C - 32°C</td>
</tr>
<tr>
<td>80% or less</td>
</tr>
</tbody>
</table>

Use under other conditions may cause malfunction.

**Miscellaneous**
- This product is for home use. Do not use for special purpose.
- This product is for indoor use only. Do not use in bathroom or outdoors as it is not water/condensation proof.
- Do not modify this product.

2.2 Applicable Room Area

<table>
<thead>
<tr>
<th>House</th>
<th>MC707VM-S</th>

**NOTE:**

1. Deodorizing efficiency means the combined removal rate of ammonia, acetaldehyde and acetic acid after burning five cigarettes in a 1m³ airtight container and running the air purifier at rated air flow for one minute.

2. Operating sound levels are the average of values measured at 1m away from the front, left, right and top of the unit. (This equal to the value in an anechoic chamber.) The values are measured without bio-antibody filter.

4. Operation Manual

4.1 Safety Precautions

Safety Precautions

- Keep this manual where the operator can easily find them.
- Read this manual attentively before starting up the unit.
- For the reason of safety the operator must read the following cautions carefully.
- This manual classifies precautions into WARNING and CAUTION. Be sure to follow all precautions below: they are all important for ensuring safety.

**WARNING**

If you do not follow these instructions exactly, the unit may cause property damage, personal injury or loss of life.

**CAUTION**

If you do not follow these instructions exactly, the unit may cause minor or moderate property damage or personal injury.

- **Never do.**
  - Never touch the air purifier (including the remote control) with a wet hand.

- **Be sure to follow the instructions.**
  - Never cause the air purifier (including the remote control) to get wet.

- **Do not use the power cable if it is damaged.**
  - Using a damaged power cable is extremely hazardous; if the power cord becomes damaged, you must obtain a replacement from the manufacturer or from a properly-authorized service agent. Do not attempt replacement yourself.

- **Do not disassemble, remodel or attempt to service this equipment.**
  - Unwarranted tampering can lead to fire and/or malfunction.

- **Do not operate with wet hands.**
  - Electric shock may occur.

- **Do not use power supplies other than the rated supplies.**
  - Fire or electric shock may occur.

- **Do not damage the electrical power cord, construct anything, or forcibly bend, stretch or twist the cord.**
  - Do not set heavy items on the cord or place the cord between items.
  - If the electrical power cord is damaged, fire or electric shock may occur.

- **Before changing filters, cleaning the equipment or moving it, turn it OFF and unplug the power cable.**
  - Working with power ON can lead to fire and/or electric shock.

- **Do not use the power cable if damaged or loose in the socket.**
  - Using the power cable in anything but proper working condition can lead to short-circuits and subsequently electric shock and/or fire.

- **Do not use in humid places or places which might be wet, such as bathrooms.**
  - Contact with water can lead to electric shock or damage the equipment.

- **Do not use where oil components, such as machine oil, are floating around.**
  - There is the danger of cracking, electric shock or combustion.

- **Do not wet the air outlet or the main unit.**
  - It may cause fire or electric shock.

- **Do not use in locations where there is a large amount of soot, such as a kitchen or locations where there combustible gas, corrosive gas or metallic dust is present.**
  - Fire or malfunction may occur.

**CAUTION**

- **Do not use close to lighting equipment (within 1m).**
  - The reception sensitivity of the remote control may be reduced and the color may change.

- **Do not use outdoors or where exposed to direct sunlight.**
  - Direct sunlight can weaken remote control signal reception sensitivity and discolor the casing.

- **Do not use near to sources of heat such as heaters.**
  - Heat can discolor and deform the casing.

- **Keep the unit and remote control minimum 2m from lighting, TVs, radios, stereos and aerials.**
  - This unit can disturb TV pictures and generate interference. Illumination can weaken remote control signal reception sensitivity and discolor the casing.

- **Do not use in the place of kitchen fans or cooker hood fans.**
  - Adverse conditions of use can shorten service-life of the prefilter and ion filter, as well as lead to equipment damage.

- **Prevent combustibles (hair sprays, etc.), sparks and inning from being drawn into the unit.**
  - Such substances can cause fire.

- **Do not insert fingers or foreign objects into the inlet or outlet openings.**
  - Electric shock or damage may occur.
  - There exists a danger of hands getting caught in the motor and causing injury.

- **The appliance is not intended for use by young children or pets without supervision.**
  - Young children or pets should be supervised to ensure that they do not play with the appliance.

- **When using pesticides of an indoor fumigation type (fume release), stop the operation of the air purifier to none of the chemical is sucked inside the unit.**
  - The chemical components will accumulate inside the unit. The current running on your physical condition, you may react to the irritation which is bad for your health.

- **When used in conjunction with a humidifier, keep mist from being directly drawn into the unit.**
  - Mists can lead to electric shock and/or equipment damage.

- **Do not block the intake or outlet.**
  - Blocked openings can reduce capacity (air will not be cleaned throughout the entire room) and/or damage the equipment.

- **Do not place any containers which hold water such as goldfish bowls or flower vases on or close to the unit.**
  - If water gets inside the unit, electric shock or malfunction may occur.

- **Do not wipe with benzine or thinner, or spray with insecticide.**
  - Such substances can cause cracking, electric shock and/or fire.

- **If not using the unit for long periods of time, unplug the power cable.**
  - Dielectric breakdown can lead to leakage current and subsequently electrical shock and/or short-circuit may occur causing a fire.

- **If the power plug is unplugged, be sure to hold and pull out the end of the power plug without holding the power cord.**
  - There is a chance that an electrical short or short-circuit may occur causing a fire.

- **Do not operate with a pre-filter or filter removed.**
  - Malfunction may occur.

- **Do not sit on, stand on or shake the unit.**
  - Malfunction may occur.

- **Do not use when the unit is on its side or leaning.**
  - Malfunction may occur.

- **When using another burner at the same time, actively ventilate the area.**
  - This unit cannot remove carbon monoxide.
  - If the ventilation is not sufficient, carbon monoxide poisoning may occur.

Toxic substances such as cigarettes (carbon monoxide) cannot be removed.

---

2

Photocatalytic Air Purifiers 13
4.2 Names and Operation of each Part

Names and Operation of each Part

- **Main unit**

**Front**

1. Front panel
2. Main unit display (page 4.)
   - Shows operation status.
3. Pre-filter (green)
   - Removes comparatively large material and dust.
4. Plasma ionizer
5. Bio-antibody filter (white)
   - Absorbs viruses.
6. Ionizing frame
7. Ionized wire
   - Small dust particles which are not captured by the pre-filter are positively charged to that they can be more easily absorbed by the negatively-charged pleated filter.
8. Streamer discharger
9. Opposing pole plates
10. Pleated filter (front: white, back: blue)
   - Absorbs dust particles using the principle of static electricity.
11. Deodorizing catalyst (black)
   - Absorbs and decomposes elements which could not be removed before returning the air back to the room.
   - Note: cannot be washed with water.
12. Filter container
   - Six replacement pleated filters are included.
13. Ventilation fan
14. Air inlet
15. Remote control storage slot
   - Stores the accessory remote control.
16. Handle
   - Use when moving the main unit.
17. Air outlet
18. Negative ionization assembly
   - Generates negative ions. Functions to combine positively charged toxic substances in a room and neutralize and transform them.
   - If static electricity is applied, the amount of negative ions generated will be temporarily reduced.
19. Power supply cord hook
   - Winds the power supply cord when storing the main unit.
   - Do not wind the cord during operation.
20. Power supply cord
1 Air intake for dust sensor
Air is taken in from here and the dust sensor detects the dirty state of the air.

2 Clean monitor (Dust)
Detects the dirty state of the air and indicates the results.

<table>
<thead>
<tr>
<th>Dust</th>
<th>Indicator</th>
<th>Off</th>
<th>On</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low</td>
<td>Red</td>
<td></td>
<td>Green</td>
</tr>
<tr>
<td>High</td>
<td>Yellow</td>
<td></td>
<td>Green</td>
</tr>
</tbody>
</table>

- In the following case, only the green light is on for the first 7 seconds regardless of pollution from the air.
- Operation directly after setting the front panel or plasma ionizer
- Operation directly after inserting the power plug
- You can change sensitivity setting of the dust sensor lamp.

3 Clean monitor (Odor)
Detects changes to odors and indicates the results.

<table>
<thead>
<tr>
<th>Odor</th>
<th>Indicator</th>
<th>Off</th>
<th>On</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weak</td>
<td>Green</td>
<td></td>
<td>Yellow</td>
</tr>
<tr>
<td>Strong</td>
<td>Green</td>
<td></td>
<td>Yellow</td>
</tr>
</tbody>
</table>

- Reactions to sudden temperature/humidity changes and odorless gas (carbon monoxide) may occur.
- There may not be any reaction for a uniform case without any changes to the intensity of the odor.
- There may be no reaction to pet odors or garlic odors.
- Different people have different sensitivity to odors so you may not notice an odor even though the lamp is green.
- In the following case, only the green light is on for the first 1 minute and this state is regarded as the reference value of the odor sensor.
- Operation directly after setting the front panel or plasma ionizer
- Operation directly after inserting the power plug

4 Automatic operation indicator (yellow)
Lit during automatic operation.

5 Airflow rate indicator (green) (page 7.)
Lit by the set airflow rate setting. (The air volume lamp is on during automatic or manual operation.)

6 Turbo mode indicator (green) (page 7.)
Lit during turbo mode.

7 Anti-pollen mode indicator (page 7.)
Lit during pollen mode.

8 Negative ion mode indicator (page 7.)
Indicates during negative ion operation.

9 OFF timer setting indicator (yellow) (page 7.)
Indicates the set OFF timer time. Indicates the remaining time after setting as the time passes.

10 Clean indicator (red) (pages 11, 12.)
The lamp will blink for cleaning time of the plasma ionizer.

11 Replace indicator (red) / Reset button
The lamp will be on for replacement time of the pleated filter and blink after certain time has elapsed from the turning on. *Press the reset button after replacement. (page 10.)

12 Lock lamp (page 7.)
Lit during lock.

13 Air intake for odor sensor
Air is taken in from here and the odor sensor detects the odor state.

14 Receiver
 Receives signals from the remote control.

15 Operation switch / stop button
Each time this button is pressed, the operation mode switches as shown below:

- (Automatic) \( \Phi ^ \text{Automatic} \)
- LL (Quiet) \( \Phi ^ \text{L (Low)} \)
- L (Low) \( \Phi ^ \text{M (Standard)} \)
- M (Standard) \( \Phi ^ \text{H (High)} \)

* During automatic operation the airflow rate at that time will also be lit.
4.3 Preparation before Operation

Preparation Before Operation

- Remote control setup

1. Remote control preparations
   - Battery is already set in the remote control but the remote control cannot be used as is without first preparing it. Use the remote control after pulling out the clear sheet from the battery cover.

2. Remote control storage
   - When the remote control is not being used, you can store it in the remote control storage slot.

3. Using the remote control
   - Point the transmitter of the remote control towards the receiver of the main unit.
     If an obstruction to the signal, such as a curtain, exists, the remote control will not operate.
   - The distance from which the remote control can transmit is approximately 6m.

4. Battery replacement
   1) Open the cover on the rear of the remote control towards the arrow.
   2) Replace the battery with CR2025 battery.
      (Be sure to set the battery with the + side of the cover as shown in the figure.)
   3) Close the cover to its original position.

- NOTE
   - Store the batteries where babies and children cannot reach them.
     If, by chance, a battery is swallowed, be sure to contact a doctor immediately.
   - When discarding batteries, cover the terminals of the batteries with tape.
     If mixed with other metal or batteries, heat, explosion or combustion may occur.

- ATTENTION
  - Battery
    - The included coin type battery is prepared for initial use.
      They will be consumed within 1 year from the manufacturing date of the air purifier.
      - A replacement target is approximately 1 year but if the reception becomes difficult, replace the batteries with new coin type battery CR2025.
      - Coin type battery close to the “recommended usage period” may need to be replaced soon.
      - In order to prevent malfunctions or injuries due to leaking or explosions, be sure to remove the coin type battery when the unit will not be used for a long period of time.

Remote control
- Do not drop or place the remote control in water.
  (Damage may occur.)
- Do not press the remote control buttons with sharp objects.
  (Damage may occur.)
- The signals may not be received well of electronic lighting style fluorescent lamps (such as inverter fluorescent lamps) are in the same room. For these cases, discuss with the dealer.
- If other electrical device operate by the remote control, either separate them from the remote control or discuss with the dealer.

- Attaching the pleated filter

  **WARNING**
  Set the filter while the power supply plug is not plugged in.

  **CAUTION**
  - The unit must be operated with a pre-filter.
    If they are not set and the unit is operated, malfunctions may occur.

1. Remove the front panel.
   - Place your fingers in the indentations on the bottom of the unit and pull forward, holding on to the bottom of the panel.

2. Remove the shock-absorbing material and then remove the plasma ionizer.
   1) Remove the shock-absorbing material.

   2) Holding the handle, lift towards yourself and remove from the top 2 hooks.
3. Attach the pleated filter.
- Remove the pleated filter from the bag.

![Diagram of pleated filter attachment]

- Hook on the top hook and bottom hooks, insert into the left and right hooks, and then secure with the tape.

1) Place the pleated filter holes on the 3 upper tabs of the deodorizing catalyst unit.

2) Hook the holes of the pleated filter on the bottom hooks.
   (2 locations)

3) Insert the pleated filter into the left and right hooks.

4) Secure the pleated filter with the tape.

4. Install the plasma ionizer in its original configuration.
- Holding the handle, snap onto the 2 upper hooks and push in.
- Insert the plasma ionizer fully.

![Diagram of plasma ionizer installation]

**NOTE**
- Only run the unit with the pre-filter and pleated filter in place. If they are not in place, running the machine may break it.
- If the front and blue sides of the pleated filter are reversed, the unit’s performance will suffer.

### Attaching the bio-antibody filter

1. Remove the pre-filter.
- Remove by pulling out in front while holding the tabs on top of the pre-filter.

![Diagram of pre-filter removal]

2. Attach the bio-antibody filter.
- Hook the holes (2 locations) of the bio-antibody filter on the hooks (2 locations) of the plasma ionizer.

![Diagram of bio-antibody filter attachment]

3. Restore the pre-filter.
- Hook the bottom part of the pre-filter on the bottom hooks (2 locations) of the plasma ionizer and then insert it into the left and right hooks (4 locations).

![Diagram of pre-filter restoration]

4. Restore the front panel.
- Hook the top hooks (3 locations) of the front panel on the grooves on top of the main unit and then close the panel.

![Diagram of front panel restoration]

**NOTE**
- Securely close the panel. Failing to do so may cause activation of the safety switch and out of unit operation.

**ATTENTION**
- The bio-antibody filter is a dedicated filter to speed up virus elimination. Use it in winter when air is dry and virus is easy to grow. Change and storage (page 9.)
- The air cleaning effect remains regardless of the attachment.
Preparation Before Operation

Installation of main unit

To install the unit, comply with the following standards to ensure performance.
If installed on a table:

ATTENTION

- If operated outside the conditions shown below, malfunction may occur.
- Indoor temperature 0-32°C
- Indoor humidity 60% or less

How to Operate

1 When operating
Press the [ON/OFF] button.
Pressing again will stop.

2 When you want to automatically switch the airflow rate
Press the [AUTO] button.
- Automatically adjusts the airflow rate to " " LL (Quiet), " L (Low), " M (Standard), " H (high) in response to the dirty condition of the air.

3 When you want to manually switch the airflow rate
Press the [FAN SPEED] button.
- Each time it is pressed the airflow rate switches as shown below allowing you to choose your desired flow.

  " " LL (Quiet)  " L (Low)  " M (Standard)  " H (High)

- The setting " " LL (Quiet) is a very slow airflow rate and is convenient when sleeping.
- After setting " " LL (Quiet) the power for cleaning the air decreases because of the operation at slow airflow rate.

4 When you want to quickly clean the air
Press the [ ] (TURBO) button.
- A high airflow rate will quickly remove any dirtiness in the air.
- This is convenient to use when cleaning.

5 When you want to remove pollen
Press the [ ] (ANTI-POLLEN) button.
- Switching the airflow speed every 5 minutes between " " M (Standard) and " L (Low) will catch pollen before they fall on the floor.

6 When you expel negative ions
Press the [ ] (RELAX) button.
Pressing again will cancel.
- Generates negative ions.

7 When you want to decide a time to stop operation
Press the [ ] (OFF TIMER) button.
- Each time it is pressed the timer setting switches as shown below.
The remaining time will be lit in the "OFF timer setting indicator".
- 1 "(1 hour) 2 " (2 hour) 4 " (4 hour) (Cancel)
- When the set time is reached, the operation will automatically stop.
- The set time can be changed if the button is pressed while the timer is operating.

8 When you want to change the brightness of the operation lamp and clean monitors
Press the [ ] (BRIGHTNESS) button.
- Each time it is pressed, the display will switch as shown below.

  (Dark)  (Off)  (Standard)

9 When you want to prevent incorrect operation
Press the [ ] (LOCK) button for 2 seconds.
Pressing again for 2 seconds will cancel.
- Stops the function of the button other than the " [ ] [LOCK] button on the main unit and buttons on the remote control.
- This makes it possible to prevent children from operating the unit incorrectly.
- When you want to release the child lock settings and the remote controller is not in your hand, remove the power plug once and then reinset it and operate the unit.

When you want to operate the unit using the button on the main unit
When the remote control is not in your hand, you can use the " [ON/OFF] (Operation Switch / Stop) button on the main unit without using the remote control. (Page 4.)

NOTE

- The unit will not operate for 3 seconds after the front panel or plasma ionizer is set or power plug is inserted even though [ ] button on the remote control is pressed.
- Operation will stop for safety when the front panel is opened during operation.
- When an incorrect operation is performed during operation
If the main unit display is abnormally on or remote control is disabled due to thunder or radio transmission during operation, pull the power plug and then re-insert it after 3 seconds.
4.4 Care and Cleaning

Care and Cleaning

Cleaning chart
For cleaning, remove each part in the number order. For restoring each part, follow the opposite order.

**CAUTION**
- Stop operation and pull the power plug before cleaning.

![Diagram of Air Purifier]

1. Front panel (page 8.)
   - If gets dirty; wipe off

2. Pre-filter (page 9.)
   - Once in two weeks; clean

3. Bio-antibody filter (page 9.)
   - 1 year after opening; replace Unwashable

4. Plasma ionizer (pages 11, 12.)
   - If the cleaning sign blinks;
     - Opposing pole plate; soak
     - Streamer discharger; soak
     - Ionizing frame (ionized wire); soak

5. Pleated filter (page 10.)
   - If the replacement sign turns on or blinks; replace

6. Deodorizing catalyst unit (page 15.)
   - If it gets dirty, without removing from the main unit;
     vacuum Unwashable

7. Air inlet for the dust/odor sensor (page 8.)
   - If clogged; vacuum

**WARNING**
During maintenance you must stop the operation and remove the power plug from the electrical outlet.
Electric shock or injury may occur.

**CAUTION**
Do not wash the main unit with water.
If water gets inside the unit, electric shock or malfunction may occur.

Cleaning the air inlet for the dust/odor sensor
- Clean dusts clogged in the air inlet for the dust/odor sensor.
- Use crevice nozzle of a cleaner for cleaning.

Cleaning the front panel
- Wipe off the dirt with a cloth or tissue slightly soaked with water.
- In the case of heavy dirt, wipe it off with a cloth soaked with mild detergent.

**CAUTION**
- Do not use hard sponge. Scratch may result.

**WARNING**
- Do not use gasoline, benzene, thinner, polishing powder, kerosene or alcohol. Crack, electric shock or fire may result.
- Do not rinse the main unit. Electric shock, fire or breakdown may result.

**ATTENTION**
- Be careful not to scratch the front or damage the rear protrusions of the removed front panel.
- In particular, the rear protrusions function as a safety switch to turn OFF the power if the front panel is opened.
- If damaged, the unit will not operate.

**NOTE**
- If the front panel is not correctly set on the main unit, the unit will not operate.

**WARNING**
- Do not touch the safety switch on back of the hole on bottom of the main unit.
- Electric shock may result.
Care and Cleaning

■ Cleaning the pre-filter
It is recommended to clean the pre-filter every two weeks.

1. Remove the front panel.
   • Lay your finger to the dent at bottom of the main unit, hold bottom part of the panel and then pull it up.

2. Remove the pre-filter.
   • Remove by pulling out in front while holding the tabs on top of the pre-filter.

3. Clean the pre-filter.
   • After using a vacuum cleaner to remove any dust, clean with water.
   • If it is very dirty, use a soft brush or a neutral cleaner to clean them dry well in the shade.

   □ NOTE
   • "Cleaning sign" may blink if any droplet remains.

4. Install the pre-filter in its original position.
   • Hook the bottom part of the pre-filter on the bottom hooks (2 locations) of the plasma ionizer and then insert it into the left and right hooks (4 locations).

5. Restore the front panel.
   • Hook the top hooks (3 locations) of the front panel on the grooves on top of the main unit and then close the panel.

   □ NOTE
   • Securely close the panel. Failing to do so may cause activation of the safety switch and out of unit operation.

   □ CAUTION
   • Do not dry at a location directly exposed to the sun.
   • Do not clean with water hotter than 50°C.
   • Do not burn with fire. Color changes or deformation may occur and the unit may become unusable.

■ Replacing the bio-antibody filter
(The bio-antibody filter should be replaced around once a year.)

1. Remove the front panel. (See the left figure.)
2. Remove the pre-filter. (See the left figure.)
3. Replace the bio-antibody filter with new one.
   • Remove a used bio-antibody filter from the hooks (2 locations) on top of the plasma ionizer.
   • Hook the holes (2 locations) of a new bio-antibody filter on the hooks (2 locations) on top of the plasma ionizer.

4. Install the pre-filter in its original position.
   (See the left figure.)
5. Restore the front panel. (See the left figure.)

   □ NOTE
   Replacing the bio-antibody filter
   • Contact your dealer for replacement bio-antibody filter.
   • Life of the bio-antibody filter is about 1 year after opening.
   • If you do not use the bio-antibody filter for a long time, store it away from direct sunlight without opening.
Replace a pleated filter

(Replace the pleated filter when the "replace indicator" on the main unit display turns on or blinks.)

1. Remove the front panel. (page 9.)
2. Remove the plasma ionizer.
   - Holding the handle, lift towards yourself and remove from the top 2 hooks.
3. Replace a pleated filter with new one.
   1) Remove a used pleated filter.
      • Remove a pleated filter from the tape at bottom of the deodorization catalytic unit and then unhook the hooks (3 locations on top and 2 locations on bottom).
   2) Take out a new pleated filter (1 sheet) and then attach it to the deodorization catalytic unit.
      • Hook on top and bottom hooks, insert into left and right hooks and then secure with the tape.
   3) Place the pleated filter holes on the 3 upper tabs of the deodorizing catalytic unit.
5) Insert the pleated filter into the left and right hooks.

4. Restore the plasma ionizer and the front panel. (page 6.
5. Insert the power plug.

6. Press the reset switch on the main unit display.
Press the reset switch with a sharp material such as a tooth pick to turn off the replacement sign. (It will beep.)

NOTE
Replace a pleated filter
- Contact your dealer for replacement pleated filter.
- It is not necessary to replace a pleated filter until the replacement sign turns on or blinks. When the replacement sign turns on, replace a filter even though it is not dirty.

* Apparent dirt is not proportional to filter performance.
- The replacement timing of the pleated filter differs depending on usage and installed place.
The replacement sign turns on after a year of everyday use in a home where 10 cigarettes are smoked per day.
(The replacement timing will be shorter for use in a heavily air polluted place.)

Remove the plasma ionizer

CAUTION
- When cleaning be careful not to cut your hands on the ionizing line. (Wearing rubber gloves is safer.)

1. Remove the front panel.
   • Lay your finger to the dent at bottom of the main unit, hold bottom part of the panel and then pull it up.

2. Remove the pre-filter. (page 9.)
Care and Cleaning

3. Remove the bio-antibody filter.
   - Remove the bio-antibody filter from hooks (2 locations) at top of the plasma ionizer.

   ![Bio-antibody filter]

4. Remove the plasma ionizer.
   - Holding the handle, lift towards yourself and remove from the top 2 hooks.

   ![Plasma ionizer]

5. Remove the opposing pole plates at back of the plasma ionizer.
   - Open the knob of the ionizer frame and hold up the opposing pole plate to remove.

   ![Ionizing frame]

6. Remove the streamer discharger.
   - Insert your finger into the hole on top (hole with ▲ mark) and then gently pull up the streamer discharger.

   ![Streamer discharger]

- **Clean the plasma ionizer**
  (If “cleaning sign” on the main unit display blinks)

   ![Blink]

   **CAUTION**
   - Stop operation before cleaning and be careful not to cut your hands with the opposing pole plate or ionizer wires. (It is safer to use rubber gloves.)

   ![Plasma ionizer]

   **CAUTION**
   - There are ionizer wires at back of the opposing pole plate. When attaching or removing, be careful not to cut them.
     - “Cleaning sign” blinks if operated while the ionizer wires are cut. The dust elimination efficiency deteriorates while the sign is blinking.
     - If the ionizer wires should be cut, replacement is necessary. Contact your dealer.

Care and Cleaning

**CAUTION**
- When cleaning the unit, be careful not to cut your hands with the opposing pole plate or ionizer wires. (It is safer to use rubber gloves.)
- When cleaning the unit, be careful not to cut the ionizer wires.
- Be sure to do in a shower-proof place such as bathroom or sink in a kitchen.
- Use only specified volume of liquid mild detergent.
- Do not use powder detergent or alkaline detergent and scrub with hard sponge. Distortion or damage to the equipment may result.

1) Ionized wire
2) Streamer discharger
3) Ionizing frame

Cleaning the plasma ionizer
1) Ionized wire (8 pieces)
   - Clean off the ionizer wires and peripheral resin part with a soft cloth.

2) Streamer discharger
   - Clean off the internal resin part with a soft cloth. (For removal, see page 11.)

3) Ionizing frame
   - Clean off the resin part with a soft cloth.
   - Use a cotton bud to wipe off dirt of odd-shaped area where your finger does not reach.
   - Be careful not to leave bits of tissue. Malfunction may result.

**NOTE**
If the ionizer wires are cut;
Replacement is necessary. Contact your dealer.

1 Wipe off only the resin part.
2 Do not touch the discharge needle. Bending the needle will reduce deodorizing performance.
Assembling the plasma ionizer

1. Attach the opposing pole plates.
   1) Securely insert the opposing pole plate into the hooks (2 locations in the middle) of the plasma ionizer.
   2) Attach the opposing pole plate while opening the knobs (one at a side) of the plasma ionizer.
   3) Insert securely until it clicks.
   4) Attach another side of the opposing pole plate.

2. Attach the streamer discharger.
   1) Insert bottom of the streamer discharger to the ionizer frame.
   2) Insert top of the streamer discharger.
   3) Confirm if it is attached securely.
Care and Cleaning

Cleaning the deodorization catalytic unit
- Vacuum dusts with a cleaner without removing from the main unit. (Do not wash.)

- Sensitivity settings of the dust sensor
  The sensitivity of the sensor differs depending on the size of room, installation place, and type of dirt.
  Change the sensor sensitivity if you don’t like it.
  1. Press “on” on the main unit for 10 seconds with the remote control pointed at the main unit while holding “(OFF TIMER)”.
     - The receiving tone sounds, one of “” L (Low), “” M (Standard) and “ ” H (High) lamps blinks for 5 seconds, and then the lamp corresponding to the set sensitivity turns on.
  2. Change the settings using the “[Operation switch/Stop] button of the main unit.
     - Switches each time it is pressed.
     - The settings is shown in the airflow rate indicator.

<table>
<thead>
<tr>
<th>Airflow speed display</th>
<th>“ ” L (Low)</th>
<th>“ ” M (Standard)</th>
<th>“ ” H (High)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dust sensor sensitivity</td>
<td>High (Sensor display becomes easy to light.)</td>
<td>Normal (setting when shipped)</td>
<td>Low (Sensor display will have difficulty coming on.)</td>
</tr>
</tbody>
</table>

3. When you decide on the settings, point the remote control at the main unit and press the “ ” [OFF TIMER] button.
   - The receive sound will beep and the setting lamp will flash.

4. Unplug the power plug one time and then after 3 seconds or more plug it in again.
   - This completes the settings.

- NOTE
  - If the operation of 4, is not performed, the unit will not return to normal operation mode. If the operation of 4, is performed, during the settings, the settings will not be correct.
  - When the sensitivity is set high, it will become difficult for the sensor lamp to go out.

- Optional accessories
  - For replacement pleated filter and bio-antibody filter, contact your dealer.

<table>

- If used with dirty parts:
  - Cannot obtain air clean effect.
  - Cannot obtain deodorization effect.
  - Odor may arise.

- Disposal requirements
  - Your Daikin product is marked with this symbol. This means that electrical and electronic products shall not be mixed with unsorted household waste.
  - Disposal of this product must be done in accordance with relevant local and national legislation. By disposing of this product correctly, you will help ensure its proper treatment, recovery and recycling, thus preventing potential negative consequences for the environment and human health. Please contact your local authority for more information.
  - Batteries must be removed from the remote control and disposed of separately in accordance with relevant local and national legislation.
4.5 Troubleshooting

Frequently asked questions

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. The dust sensor does not change from the red (green) lamp.</td>
<td>This is due to dusts built up in the dust sensor. Vacuum dusts from the air inlet with a crevice nozzle of a cleaner and then manually operate the unit for a while. The sensor will go back to normal.</td>
</tr>
<tr>
<td>2. The sensitivity of the dust sensor seems to be bad (or too good).</td>
<td>This is because react time of the dust sensor differs depending on the size of room. If the unit is installed at the lower position of a room, reaction to smoke of cigarettes or others may be bad. Re-install the unit at the higher place such as on a shelf. If the sensitivity is still bad, adjust the sensor with sensitivity settings.</td>
</tr>
<tr>
<td>3. Can I wash the deodorization catalytic unit? Is replacement necessary?</td>
<td>The deodorization catalytic unit cannot be washed. (The unit will be ruined.) Vacuum dusts with a cleaner without removing from the main unit. Replacement is not necessary.</td>
</tr>
<tr>
<td>4. What to do if the ionizer wires are cut?</td>
<td>If the ionizer wires should be cut, replacement is necessary. Contact your dealer.</td>
</tr>
<tr>
<td>5. Is not a problem to use while the cleaning sign is blinking?</td>
<td>While the cleaning sign is blinking, electric dust collection and deodorization functions remarkably deteriorate as electricity supply to the ionizer wires and streamer discharger stops for safety. Be sure to inspect inside until the sign turns off. (Blinking is not a problem from a safety viewpoint.)</td>
</tr>
</tbody>
</table>

Trouble Shooting

- Investigate the problem once again before requesting repairs.

<table>
<thead>
<tr>
<th>Case</th>
<th>Check</th>

[Storage and handling precautions]  
- If you do not use the filter soon, store it in a cool, dry place that is not exposed to direct sunlight.  
- The filter color density may become different for production technique reasons. The performance is not affected.  
- Unpack the filter just before use. (Otherwise the performance may be affected or the quality degraded.)  
- Dispose of the vinyl bag just after unpacking. Otherwise a child may play with it (pulling it over his/her head, for example), resulting in an accident.  
- Keep the packages out of children's reach.  
- Dispose of a used filter as noncombustible waste. For details, follow your local waste sorting rules and regulations.  

6. Troubleshooting

6.1 Basic Inspection

(1) Is the connector for the PCB plugged in? Or is there any poor connection?

(2) Is the wire harness broken?

---

**It is not malfunction**

Red lamp is blinking. Time for cleaning the plasma ionizer.

Red lamp is on or blinking. Replace the pleated filter and press the reset button.

---

**Troubleshooting with Airflow Rate Indicator**

The airflow rate indicators blink simultaneously.

The DC fan is locked.
6.2 Troubleshooting

6.2.1 Equipment does not operate, or operation lamps does not light.

Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred.

Front panel switch operation check

Rear side

Protrusion
6.2.2 Remote control sends signals erratically.

⚠️ Caution
Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred.

1 Models Covered
MC707VM-S
MC707VM-W

2 Method of Malfunction Detection

3 Malfunction Decision conditions
You can operate with ON/OFF switch on the unit, but not with remote control.

4 Supposed Causes
• Remote control battery is exhausted.
• Remote control is defective.
• Display PCB is defective.
• Malfunction is caused by inverter fluorescent lamps.

5 Troubleshooting

<table>
<thead>
<tr>
<th>Diagnosis</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Is battery correct? (2.5V or more?)</td>
<td>*Release child lock.</td>
</tr>
<tr>
<td>Check if infrared signal is sent from remote control. (Check with an infrared checker.)</td>
<td>Replace battery.</td>
</tr>
<tr>
<td>Is signal properly transmitted?</td>
<td>Replace remote control.</td>
</tr>
<tr>
<td>Check remote control for normal operation.</td>
<td>Replace display PCB.</td>
</tr>
<tr>
<td>Is there any inverter fluorescent lamps around the unit?</td>
<td>Change installation location.</td>
</tr>
</tbody>
</table>
6.2.3 Sensor LED remains lit.

<tr>
<td>MC707VM-W</td>
</tr>
</tbody>
</table>

| Method of Malfunction Detection |

3 Malfunction Decision conditions

4 Supposed Causes
- Wrong diagnosis (The red LED stays on while the dust sensor or odor sensor is sensing dust and moisture in the air. Such LED light-up has been wrongly judged as an error.)
- Sensor failure (The display PCB is in trouble.)

5 Troubleshooting

<table>
<thead>
<tr>
<th>Diagnosis</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Put the plug in a socket while pressing the ON/OFF switch.</td>
<td></td>
</tr>
<tr>
<td>Does LED light out for about 5 seconds? Yes</td>
<td></td>
</tr>
<tr>
<td>No</td>
<td></td>
</tr>
<tr>
<td>It is not malfunction. The sensor is detecting dust in the air.</td>
<td></td>
</tr>
<tr>
<td>- Clean around the sensor.</td>
<td></td>
</tr>
<tr>
<td>- Change the installation location.</td>
<td></td>
</tr>
<tr>
<td>Replace the display PCB. (Preferably replace the sensor too.)</td>
<td></td>

</tr>
<tr>
<td>It is not malfunction.</td>
</tr>
<tr>
<td>- The sensor may be operating as room is oversized or open.</td>
</tr>
</tbody>
</table>
6.2.4  DC fan locks.

Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred.

1  Models Covered

MC707VM-S
MC707VM-W

2  Method of Malfunction Detection

Abnormality of the fan motor is detected by revolutions with the Hall IC while the fan motor is running.

3  Malfunction Decision conditions

When the fan motor is not revved up.

4  Supposed Causes

- Fan motor is defective.
- Power supply and control PCB is defective.
- Connector is off.

5  Troubleshooting

<table>
<thead>
<tr>
<th>Diagnosis</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Four airflow rate indicators blink simultaneously.</td>
<td>Correct.</td>
</tr>
<tr>
<td>Retry to operate with ON/OFF switch.</td>
<td>NOTE: If connector is unplugged with unit turned on, fan motor may be damaged. (Turn off power before plugging in connector.)</td>
</tr>
<tr>
<td>Airflow rate indicators blink then go off.</td>
<td></td>
</tr>
</tbody>
</table>

Is fan motor connector off?

- Yes
  - Replace the fan motor.
  - When the indicators blink after restarting, replace the power supply and control PCB.
- No
6.2.5 LED automatically operates.

Be sure to turn off power switch before connect or disconnect connector, or parts damage may be occurred.

| Restart. Does unit beep after 3 seconds? | |
| Yes | |
| No | |
## 7. Removal Procedure

### 7.1 Removal of the Front Panel / Filters

**Warning** Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1. Appearance</strong></td>
<td><img src="image" alt="Diagram of front panel" /></td>
</tr>
<tr>
<td><strong>2. Removing the front panel</strong></td>
<td><img src="image" alt="Diagram of front panel removal" /></td>
</tr>
</tbody>
</table>

1. Hold both sides of the front panel and pull out the panel toward yourself.

* The upper part of the panel is roundish. When assembling, slide the panel in upright position for easy installation.
### Removal Procedure

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>(2) Lift the panel to undo the hooks. Now detach the panel.</td>
<td>* The projection at the back side of the front panel operates the safety switch. Be careful not to transform the projection.</td>
</tr>
</tbody>
</table>

### 3. Removing the pre-filter

1. Bend the pre-filter slightly and detach the two upper knobs.

2. Lift the pre-filter and release it from the lower hooks.

* When assembling, catch the lower hooks first and then the right and left hooks.
### Procedure

**4. Removing the Bio-Antibody Filter**

1. Bend the fixing part slightly to undo upper two hooks.

### Points

* When assembling, catch the bottom hooks. (Unless the hooks are caught, the pre-filter, which uses the same hooks, cannot be assembled.)
5. Removing the plasma ionizer unit

(1) Hold the grips of the plasma ionizer unit. Pull the unit toward yourself to release its bottom.

(2) Lift the unit to undo the hooks. Now detach the unit.
6. Removing the pleated filter

(1) Undo the three hooks.

(2) The filter is made of fiber. Undo the hook with stretching the filter.

(3) Zoomed up view of the upper hooks.
<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>(4) Undo the two bottom hooks and remove the filter.</td>
<td>* When assembling, stick the Velcro.</td>
</tr>
<tr>
<td>(5) A piece of Velcro is at the bottom.</td>
<td></td>
</tr>
<tr>
<td>(6) Zoomed up view of the bottom hooks.</td>
<td></td>
</tr>
<tr>
<td>Procedure</td>
<td>Points</td>
</tr>
<tr>
<td>-----------</td>
<td>--------</td>
</tr>
<tr>
<td>(7) Take out the spare filter from the holder.</td>
<td></td>
</tr>
<tr>
<td>(8) Take out the filter from the bag and attach it.</td>
<td></td>
</tr>
</tbody>
</table>
### 7. Removing the deodorizing catalytic filter

1. Undo the right and left hooks.

2. Undo the bottom hook and remove the deodorizing catalytic unit.
<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>(3) Undo the two hooks at the bottom and remove the deodorizing catalytic filter.</td>
<td></td>
</tr>
<tr>
<td>(4) When assembling, catch the bottom hooks, slightly bend the filter itself and fit it into position.</td>
<td></td>
</tr>
</tbody>
</table>
### 7.2 Removal of Streamer Electric Discharge Unit

**Warning**  Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Catch the upper hole with your finger and lift it up.</td>
<td><strong>Preparation in advance</strong> * Remove the plasma ionizer unit.</td>
</tr>
<tr>
<td>(2) Zoomed up view of part A.</td>
<td></td>
</tr>
<tr>
<td>(3) Zoomed up view of part B.</td>
<td></td>
</tr>
<tr>
<td>Procedure</td>
<td>Points</td>
</tr>
<tr>
<td>-----------</td>
<td>--------</td>
</tr>
<tr>
<td>(4) Remove the screw.</td>
<td></td>
</tr>
<tr>
<td>(5) Lift up and slide the unit to remove it.</td>
<td>* When assembling, insert the upper narrow sheet metal.</td>
</tr>
</tbody>
</table>
### 7.3 Removal of Ionizing Wire

**Warning** Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Removing the counter grid</td>
<td>Part A</td>
</tr>
<tr>
<td>(1) Undo the outer hook and lift the counter grid to detach.</td>
<td></td>
</tr>
<tr>
<td>(2) Zoomed up view of part A.</td>
<td></td>
</tr>
</tbody>
</table>

* When assembling, fit the position in the groove.
2. Removing the ionizing wires

(1) Pinch and detach the ionizing wires with pincers.

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Diagram" /></td>
<td><img src="image" alt="Diagram" /></td>
</tr>
</tbody>
</table>

**CAUTION**

Be careful not to get your hands cut by the ionizing wires.

* Once removed, the ionizing wires cannot be reused.
* When cleaning the ionizing wires, do not remove them. (See the Operation Manual.)
* If the air purifier is used with the wire cut, the clean indicator will blink after 24 hours.
## 7.4 Removal of Fan Motor

**Warning**  Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1. Removing the back cover</strong></td>
<td></td>
</tr>
<tr>
<td>(1) Remove the 2 screws from the front top.</td>
<td></td>
</tr>
<tr>
<td>(2) Remove the 2 screws from the back cover.</td>
<td>* Point Note that the screws are provided deep at the front.</td>
</tr>
<tr>
<td>(3) Lift and detach the back cover from the main body.</td>
<td></td>
</tr>
</tbody>
</table>

*Hooks for power supply cord*
## 2. Removing the fan motor

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) The figure shows the wiring routes.</td>
<td>* Once removed, the seal material cannot be reused.</td>
</tr>
<tr>
<td>(2) Peel the seal material.</td>
<td></td>
</tr>
<tr>
<td>(3) Disconnect the fan motor connectors.</td>
<td></td>
</tr>
<tr>
<td>Procedure</td>
<td>Points</td>
</tr>
<tr>
<td>-----------</td>
<td>--------</td>
</tr>
<tr>
<td>(4) Remove the nut and pull out the fan.</td>
<td></td>
</tr>
<tr>
<td><img src="image1.png" alt="Diagram" /></td>
<td></td>
</tr>
<tr>
<td><em>When assembling, align the mark on the fan with the D cut on the motor shaft.</em></td>
<td></td>
</tr>
<tr>
<td>(5) Lift and detach the harness retainer.</td>
<td></td>
</tr>
<tr>
<td><img src="image2.png" alt="Diagram" /></td>
<td></td>
</tr>
<tr>
<td>(6) When assembling, put part A first in the groove, and then slide part B along the way.</td>
<td></td>
</tr>
<tr>
<td><img src="image3.png" alt="Diagram" /></td>
<td></td>
</tr>
<tr>
<td>Procedure</td>
<td>Points</td>
</tr>
<tr>
<td>-----------</td>
<td>--------</td>
</tr>
</tbody>
</table>
| (7) Remove the 3 screws from the lock plate and take out the fan motor. | * The motor and the harness are integrated together.  
* Make sure no washers are left behind the fan. |
7.5 Removal of Electrical Box / PCB

**Warning** Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>* Remove the back cover.</td>
<td></td>
</tr>
<tr>
<td>* Disconnect the fan motor connector.</td>
<td></td>
</tr>
<tr>
<td><strong>1. Disconnecting the faston terminal</strong></td>
<td></td>
</tr>
<tr>
<td>(1) Disconnect the terminal located at left.</td>
<td></td>
</tr>
<tr>
<td>(2) Disconnect the terminal located at right.</td>
<td></td>
</tr>
<tr>
<td><strong>2. Removing the electrical box</strong></td>
<td></td>
</tr>
<tr>
<td>(1) Remove the 2 screws from the front bottom.</td>
<td></td>
</tr>
</tbody>
</table>

* The screws are M4×12 in size. (The other ones are M4×16.) Use regular length of screws.
### 3. Removing the PCB

**Procedure**

(1) Undo the 2 hooks at the back and take out the flame-proof plate.

**Points**

* When assembling, fit the box in the groove.

* When fitting the flame-proof plate in position, be careful not to confuse the inserting positions.

---

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>(2) Pull out the electrical box to detach.</td>
<td>* When assembling, fit the box in the groove.</td>
</tr>
</tbody>
</table>

ISO14001 assures an effective environmental management system in order to help protect human health and the environment from the potential impact of our activities, products and services and to assist in maintaining and improving the quality of the environment.

Daikin Europe N.V. is approved by LRQA for its Quality Management System in accordance with the ISO9001 standard. ISO9001 pertains to quality assurance regarding design, development, manufacturing as well as to services related to the product.

Daikin units comply with the European regulations that guarantee the safety of the product.

Daikin’s unique position as a manufacturer of air conditioning equipment, compressors and refrigerants has led to its close involvement in environmental issues. For several years Daikin has had the intention to become a leader in the provision of products that have limited impact on the environment. This challenge demands the eco design and development of a wide range of products and an energy management system, resulting in energy conservation and a reduction of waste.

ISO14001 assures an effective environmental management system in order to help protect human health and the environment from the potential impact of our activities, products and services and to assist in maintaining and improving the quality of the environment.
